

UBIQUITI QA ENGINEER TEST ASSIGNMENT

QA engineer: Anca Paraschiv

Report date: 12.02.2026

Requester: Sara Askeback

Bug reports

Title: Incorrect category filtering - “Clubs” venue appears under “Live Music Venues”

Type: Bug

Severity: High

Description:

When visiting the venues page and filtering by category, only venues belonging to the selected category should be shown.

On Live Music Venues page a location from another category, Clubs, is displayed.

Steps to reproduce:

1. Visit

<https://www.inyourpocket.com/sweden/stockholm/venues?chapter=nightlife&category=live-music-venue>

2. Observe 1st venue - Fasching

Expected result:

The page contains only venues from the selected category, Live Music Venues.

Actual result:

A venue from Clubs category appears under Live Music Venues category.

Screenshots attached:

- 1_clubs_shown_on_live_music_venues_page
- 2_clubs_shown_on_live_music_venues_page_wrong_api_response

Technical details:

Request:

`api/cities/1208/venues?categories=112788&chapters=77524&offset=0&limit=20`

The API request filters using categories=112788, but in the response one element from category 112778 is retrieved.

Probable cause: Incorrect API filtering logic

Additional findings:

Same behavior happens for page showing venues for category Cafes: Ice cream locations appear under this category.

URL:

<https://www.inyourpocket.com/sweden/stockholm/venues?chapter=cafes&category=cafes>

Device: Desktop (Windows 10)

Browser: Google chrome Version 144.0.7559.133 (Official Build) (64-bit)

Reproducible on:

- Samsung Galaxy S21+ 5G (Android 15), Google Chrome
- Desktop (Windows 10), Microsoft Edge Version 144.0.3719.115 (Official build) (64-bit)

Environment: Production

Title: Map/Grid toggle buttons do not change view or state

Type: Bug

Severity: Medium

Description:

When showing locations/venues, the customer should be able to switch from grid to map, as desired. Grid view is used to show the venues in a list format, while map view should show the locations on a map, for easier localization.

Changing from grid to map and back is not possible.

Steps to reproduce:

1. Visit

<https://www.inyourpocket.com/sweden/stockholm/venues?chapter=nightlife&category=live-music-venue>

2. Click on Map toggle button (on top on the venues list)

3. Click on Grid toggle button

Expected result:

When clicking on Map toggle button:

- The view should change from grid to map (the venues should be shown on a map for easier localization)
- Map button shows active/selected state

When clicking on Grid toggle button:

- the view should return from map to grid (the venues should be presented in a list/grid layout)
- Grid button shows active/selected state

Actual result:

- Map/Grid toggle buttons do not change the view from grid to map and back
- The state of the toggle buttons is not changed

Video attached:

- 3_map_buton_not_functional

Technical findings:

- The buttons have click handlers attached, but no visible behavior occurs
- Click event is triggered (verified via DevTools monitorEvents)

Possible causes:

- incomplete implementation
- broken state update

Device: Desktop (Windows 10)

Browser: Google chrome Version 144.0.7559.133 (Official Build) (64-bit)

Reproducible on:

- Samsung Galaxy S21+ 5G (Android 15), Google Chrome
- Desktop (Windows 10), Microsoft Edge Version 144.0.3719.115 (Official build) (64-bit)

Environment: Production

Improvement / Enhancement / UX:

1. Venues page - <https://www.inyourpocket.com/sweden/stockholm/venues>

a. No default sorting

Observation:

Venues appear in a fixed (order does not change on refresh), but unclear order (not alphabetical, category-based, or by relevance).

Suggestion:

Add default sorting and a sort by dropdown list.

Screenshot attached:

4_venues_page_no_sort

b. Missing search functionality

Observation:

There is no search input – the users cannot search for specific venues.

Suggestion:

Add search/filter by name

Screenshot attached:

4_venues_page_no_sort (it can be seen in same as previous)

c. Pagination count improvement

Observation:

Page shows initially 20 venues out of 95, but layout supports 21 venues (since there are 3 venues/row).

Suggestion:

Change pagination limit to a number that can be divided by 3, will fill all the spots in the layout.

Screenshot attached:

5_venues_page_not_using_all_alloted_spaces

d. Inconsistent filter behavior

Observation:

When category does not exist within a selected chapter:

- sometimes the invalid filter remains visible
- sometimes the filter disappears

Examples:

- /venues?category=live-music-venue&chapter=cafes → category still shown
- /venues?category=cafes&chapter=getting-there → category removed

Suggestion:

Standardize behavior:

- either clear invalid filters
- or show a placeholder in case the filter is invalid

Screenshots attached:

2. **Stockholm page** - <https://www.inyourpocket.com/sweden/stockholm>

Observation:

When visiting page for Stockholm, in the Featured Articles section, the text under article images is truncated/not fully visible.

However, on “View All Articles” the same text displays correctly on two lines.

Suggestion:

Make layout consistent or allow text wrapping.
